## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 are drawn to a semiconductor device, classified in class 257, subclass 774.
- II. Claims 5-12 are drawn to a method of manufacturing a semiconductor device, classified in class 438, subclass 629.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the invention in claims 1 and 3 is claimed to be manufactured in claims 5 or 10 through selective etching. However, it is possible to manufacture the substantially flat hard mask as claimed through another and materially different process, such as CMP.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
